

DIGIMIC®

Discussion system - wired

Description

DIGIMIC – the most reliable conference and discussion system for over three decades now takes you beyond digital.

The digital conference system provides a 100% stand alone solution and is completely self-configuring. With DIGIMIC it is easier than ever before to setup even larger and complex conference systems. Once a microphone unit is connected it is ready for use instantly. To adjust the system for different applications, all necessary settings are done via the user-friendly menu on the front side of the central control console.

The delegate's frontend – the microphone unit – offers a thoughtful ergonomic design enabling the delegate to concentrate on the conference. It has a high quality microphone and two loudspeakers for decentralised sound, which are switched off when the corresponding microphone is activated.

The shown basic version (DIGIMIC wired) is a discussion system with microphone functionality. It consists of the central control unit DCen with the connected delegate units DMic and/or DChair.

All system parameters are controlled and displayed at the central control unit DCen. All common microphone operating modes are implemented and selectable, e.g. to limit the number of activated microphones at the same time up to 6 (e.g. AUT6 + Chairperson).

All units are connected in single-cable technology. About 100 units may be connected to one central control unit and can be expanded to several thousand units within one system.

System Components

DCen Central Control Unit for controlling and supplying of up to 100 wired system units

DChair Delegates' Unit with PRIO functionality and additional *mute all* button

DMic Delegates' Unit with illuminated microphone button

TMD/01 Conference Microphone with ring-shaped live indicator and integrated wind shield functionality, gooseneck

TM58/6 Conference Microphone with ring-shaped live indicator, gooseneck

D9 Connection cable with lockable, robust S8G-connector

Accessories

K45/16 Conference Headphone

DExt Additional Power Supply to expand the conference system for more wired delegate units
