DIGIVOTE® Xpress

PRODUCT INFORMATION

Starter Kit

*The most memorable and productive meeting and learning activities share a common element: **participation**.*

By providing electronic feedback between students and instructor, interactive meetings:

- ◆ *Maximize group members attention by providing a visual and physical stimulus*
- ◆ *Increase participant comprehension*
- ◆ *Provide immediate feedback between instructor and students*
- ◆ *Improve participant recall*

DIGIVOTE®Xpress is a wireless Response System that has proven:

Reliability

Keypads are small and lightweight, housed tough plastic casings. Additionally, the keypads are powered by two replaceable AAA batteries so you can avoid the costs and logistics associated with recharging racks.

Simplicity

Two-way infrared design helps you avoid messy wires. Simply pass out the keypads, turn on your PC running the Xpress software and infrared receiver, and run your interactive session. It's that easy.

Flexibility

Portable components let you immediately turn any room into a meeting facility. Unlike many other products, DIGIVOTE®Xpress is supported by a wide variety of multimedia presentation, entertainment, market research, decision making, classroom management, and teleconferencing applications. Multiple IR receivers can be added by an optional IR hub to increase range and performance.

Functional Summary

The keypad is a lightweight cordless handheld device that provides data interactivity in a variety of presentation and learning environments.

The DIGIVOTE® system uses a very unique infrared frequency technology in the keypad to transform the group experience from a one-way information flow to a dynamic two-way information flow that has been proven to provide higher attention and retention rates

The Keypad allows users to participate in the interactive process by responding to multiple choice questions and viewing the results of the group response on a monitor or projection screen. The collected data identifies the understanding of the group and, as appropriate, its teams and individual users. In addition to the visual display, the system tabulates, sorts, and stores responses for post-session analysis and printing.

BRÄHLER ICS is committed to continually improving its products and so reserves the right to make technical modifications without notice.

PRODUCT INFORMATION

Starter Kit

The *DIGIVOTE® Xpress* System – plug and vote

DIGIVOTE® Xpress Starter Kit:

- 30 voting units *
